

CLARiNET

Package Coding Control

“Using CLARiNET has been a major advance as it has eliminated the traditional problems of integrating coding equipment from different manufacturers.”

A PROVEN SOLUTION FOR CODING SET UP AND CONTROL

CLARiNET™ Package Coding Network control software provides a proven multi-technology, multi-brand solution for the network set up and control of coding, labelling and packaging identification equipment.

Extremely flexible and straightforward to install, CLARiNET can operate as a self-contained package coding network control system or can integrate with SCADA, factory networks, MES and ERP systems to form part of a broader enterprise solution.

CLARiNET provides a simple graphical user interface and network control for the quick and error free set up of all your coding and labelling equipment. Barcode set up using wired or wireless SCANPOINT barcode reading equipment provides quick and simple set up of coding and automatic identification equipment, for the correct product and the correct packaging.

Fixed position barcode reading equipment connected to CLARiNET can ensure every single item of packaging is correct. The CLARiNET Barcode Validation option can be used to either confirm pre-printed packaging is correct for the selected product or to validate barcodes and labels being overprinted on-line.

In addition to set up and control CLARiNET provides valuable feedback on production performance and equipment efficiency. Live information is displayed on the intuitive CLARiNET display and performance information is recorded into production and audit log files to ensure traceability and to allow quantitative performance analysis against Key Performance Indicators (KPI).

The CLARiNET Intranet option uses standard intranet technology and your standard web browser to allow the live performance information from CLARiNET to be viewed in real-time, enterprise-wide.

CLARiNET provides a single proven network solution compatible with a wide range of coding, labelling and inspection equipment including: Accu-Sort, Alpha-Dot, Datalogic, Datamax, Domino, Imaje, ICE, Linx, Markem, Marsh, Mectec, TEC, Videojet Zebra and much more.
